

## GPS Setup

These instructions may vary depending on the GPS unit you are using refer to user manual.

These instructions will work with all models of the MAP GPS Dataloggers.

### **You must set these settings for your *MAP GIS V* to operate properly**

1. Turn on GPS unit. (Push button on top of the receiver or button with red light bulb)
2. Push menu twice. On some older units push the page button to get to setup.
3. Go to Setup by pushing the arrow keys. Push Enter.
4. Use arrow keys to move and highlight Interface. Press enter.
5. Go to the serial data format line (on some unit this will already be highlighted or darkened). Push enter.
6. A box with different selections will appear. Using the arrows scroll down to the NMEA in/NEMA out until it is highlighted. Press enter.
7. Then push page or quit to get back to the main screen of the satellites.
8. Your GPS receiver is now set up to interface with your Map GPS V Datalogger.
