- Manure spreaders
- Combine platforms
- Row heads
- Grain carts

All MAP Tanks are designed with a 4 to 12 compartment baffle system. All tanks are made of High Molecular Weight Polyethylene (HMPE) the same plastic used for automotive fuel tanks, fire tanks, and spray tanks. HMPE handles environmental stress, is crack resistant, and has high impact strength and toughness even at very low temperatures. In addition the product has easier machine and work-versatility.

The use of UV-stabilizations (carbon black) improves its weather resistance. All tanks are UV protected and all will include 2' outlets and Fill lid. All tanks can come with the MAP slope floor and forklift bottom for ease of handling.

Introducing the Fire Responder

The Fire Responder One is a custom-built, low profile water tank, capable of fighting wild-land, oil, or grease fires.

The unit comes with two different nozzles. One for oil and grease fires and another for grass fires . Each nozzle has a special foam capsule which multiplies the effectiveness of the water to extinguish the fire.

"I was amazed by how well it worked, It exceeded my expectations"

-Treasure County Sheriff, Robison.
